

MMC RYOTEC: state-of-the-art and custom made products for high end clients

The increasingly diversified global needs of a demanding industry which requires superior products, systems and services is the perfect setting for a company like MMC RYOTEC Corporation to thrive. Under the skillful leadership of President and CEO Mr. Katsu Yamamoto, MMC RYOTEC Corporation offers technologies of unique carbide materials, consultative products and services for infrastructure in the automotive, electronics, steel, hygiene, mining and construction industries around the world.

Operational scope ranges from the manufacture of resources and basic materials to high-performance processed products, as well as comprising engineering services and resource recycling, MMC RYOTEC Corporation is organized in three main business lines under the DIAEDGE brand: wear-resistant tool, rock tools and carbide materials. Wear resistant tools utilize the superior strength and solidity of cemented carbide and are manufactured in an integrated line, where these materials can be developed through precision processing technology, providing flagship products such as the coating tool slot die, used in liquid crystal panels, high-functional films

and lithium-ion batteries. Rock tools are manufactured from highly wear resistant steel and tungsten carbide inserts, so as to provide the client with unbeatable consistent quality. Regarding carbide materials, this line has definitely elevat-

ed the process control technology, pressing, and sintering activities.

As holders of a strong presence in the United States, the company's sight is now set on gaining more traction in South America, where the prospects for expansion are as sizeable as the continent itself. "Future growth is in countries like Chile, Peru, Colombia, which have

very strong mining activities".

Mr. Yamamoto reveals yet two more assets from his company's plentiful galore: "We need to be constantly developing and innovating, that is to say, focused on kaizen to improve our product. We develop custom-made products that result from intensive meetings with our customers in order to match perfectly their requirements".

Keenly aware that quality will always supersede quantity, Mr. Yamamoto's strengthens MMC RYOTEC Corporation leading it to be positioned as an outstanding and profitable supplier of engineered carbide products in the global market, for which he stresses: "My continuous challenge is to make the company more robust and resilient, taking a circular economy approach which will contribute to a sustainable world and will honor the belief for which I incessantly work; 'For People, Society and the Earth'".
